

B.I.G. Paint System Delivers Unprecedented Results to Protect Your Investment

For years, B.I.G. Enterprises, Inc. has sought to continuously improve its customer's ownership experience by leading the industry in innovative booth technology and design features.

Features like heavy-duty stainless steel, bullet and blast resistant construction have been created to respond to our customers' needs...from theme parks to nuclear power plants.

Today, B.I.G. announces a feature that is now **standard to all their booths**—a paint system that shows no signs of rusting, no undercut creeping and no corrosion at the scribe cut in the steel after 3,500 hours of punishing laboratory tests.

3,500 hours of punishing lab tests is equal to years of harsh weather conditions. No other manufacturer of booths offers this paint system. Now, you can rely upon B.I.G.'s painting system to protect your booth investment for years to come.

How was the lab test accomplished?

An impartial and independent salt spray corrosion test laboratory—per ASTM B117—was engaged to push the limits of the B.I.G. updated painting system. Four separate painted booth panels were placed in an isolated salt spray chamber where they were continually monitored while being subjected to a simulated hostile weather environment.

What was the result?

After 3,500 hours, the lab could not find any signs of rusting, no undercut creeping and no corrosion at the scribe cut in the steel.

Final Results:		Scale		
		0-----10		
		Poor		Perfect
B.I.G. Booth:				
Date In	Date Out	Hours In	Undercut Rating	Rusting Rating
9/14/2008	3/4/2009	3,552	10	10

In Summary:

The catalyzed two-component polyurethane topcoat paint serves as a functional booth protection feature by resisting chemical, impact, fade, abrasion and UV exposure.

Even in 2005—four years prior to this new paint system, B.I.G.'s booth at Six Flags in New Orleans sat submerged in floodwaters for two months. After the theme park was pumped dry, the park's facility staff remarked on the relative good condition of the B.I.G. booth. B.I.G. is never satisfied, we always want to improve your booth ownership experience. Thus today, we offer our new paint system unmatched by any other booth manufacturer.

B.I.G. is proud to offer our customers this exceptional degree of protection as a new standard booth feature.

Other unique design standards exclusive to B.I.G. Booths include:

- Slide Doors Top Hung By Eight 2 1/4" Steel Ball Bearing Rollers
- Stainless Steel Slide Door Guides
- Welded Stainless Steel Slide Door Pull Handles
- Steel Framed Slide Windows, Top Hung With Stainless Steel Sill
- Stainless Steel Swing Door Hinges
- Heavy Gauge Steel Plate Floor Covered With Industrial Rubber Tiles
